

# Vacu-Cell™ System

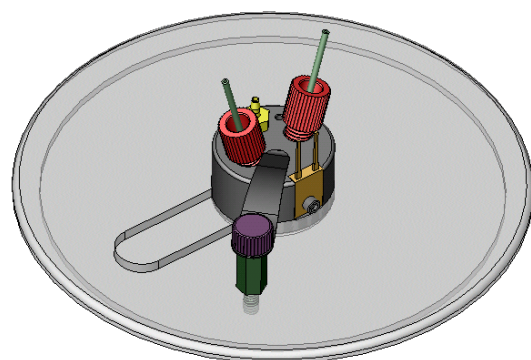

## Microscope Stage Holders for Vacu-Cell Bodies

Stage holders are available for the Vacu-Cell LFR, CPR and OTR models. These holders secure the Vacu-Cell in the center of your microscope stage. Stage holders are available for Olympus, Nikon and Zeiss microscopes. The Vacu-Cell is held in place using a spring clip and one thumb screw. Holders for other microscopes are available upon request.

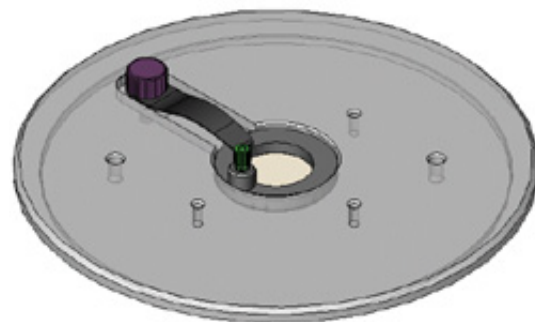

These stage holders are manufactured from acrylic to minimize the loss of heat from the Vacu-Cell to the microscope stage. Stage holders made from other materials are available upon request. Heated stage holders made of aluminum are available for the Rectangular and Mini Vacu-Cell series chambers.
