

Vacu-Cell™ System

Vacuum Pump System Model VCS-1

The Model VCS-1 vacuum pump provides a handy vacuum source for use with the Vacu-Cell line of incubation chambers. The pump delivers approximately -20 inches of mercury vacuum. The vacuum port is conveniently located on the front panel and uses a standard female Luer lock fitting. A valve on the front panel can be used to apply and release the vacuum from the attached Vacu-Cell. A vacuum gauge measures the vacuum available on the output port.
